FineCut Saw
10-5/8" 15 tpi

This saw is designed especially for manually operated miter boxes. The 14" blade has 18 teeth per inch, for a smooth, fine cut, with a narrow kerf for minimum stock removal. It's designed to make degree cuts in all types of wood moldings (from crown moldings to intricate decorative ones). Sawing is so smooth that sanding is often not required. The top brace found on traditional miter saws is nonexistent here; as a pull-saw, it's not required. The blade will not buckle during use. Therefore, this saw's usefulness is not limited to the miter-box; it makes a great general carpentry saw, and also cuts cleanly through plastic pipes such as PVC and ABS, up to 10" in diameter. All in all, the 10-2210 Miter Saw is the perfect tool for finish carpenters, cabinetmakers, and woodworkers who demand precision in their work.

Recommended For: All miter cuts, crown molding, intricate ornamental molding, picture frames, general fine woodworking, large PVC and ABS pipes, and acrylic boards.

Special SharkSaw® Features:

- **Pull-To-Cut:** The SharkSaw® blade cuts when drawn toward you. This results in a more natural, smoother, straighter, and less fatiguing sawing operation—due in part to SharkSaw's thinner blade.
- **Raker Tooth:** This special tooth cleans the sawdust out of the kerf as the blade is pushed forward.
- **Diamond-Ground:** SharkSaw® blades are precision diamond-ground to sharpen each tooth on three sides. The resulting blades are extremely sharp.
- **Impulse Hardening:** SharkSaw's teeth are electrically hardened to improve longevity. In fact, they hold their edge two to three times longer than conventional blades.
- **Soft & Comfortable Handle:** Industrial strength handle features rubber-like elastomer double-injection, non-slip grips, for long-lasting comfort.
- **Replaceable Blade:** Twist-lock design allows for fast, easy replacement of worn blades.
