Miter Saw 14" 18 tpi	FineCut Saw 10-5/8" 15 tpi	

This 14" specialty saw is designed to cut the many new varieties of composite materials—mixtures of polymer and wood fiber—commonly used in the construction of outdoor decking, railings, and staircases. Composite materials are prone to stickiness, which often makes them difficult to cut, but the Composit™ Saw's 9-tpi saw blade features raker spaces, a special design that cleans the bottom of the kerf. Because this saw does not generate high heat, as an electric saw would, dangerous kickbacks are eliminated. The Composit™ Saw is perfect for cutting fascia, pickets, posts, and notches for precision placement. It's also great for cutting treated lumber and greenwood. The Composit™ Saw features a comfortable, soft-grip handle and a simple, twist-lock blade for quick and easy replacement and compact toolbox storage.

Recommended For: Composite decking, fascia, pickets, posts, treated lumber, greenwood.

Special SharkSaw® Features:

- **Pull-To-Cut:** The SharkSaw® blade cuts when drawn toward you. This results in a more natural, smoother, straighter, and less fatiguing sawing operation—due in part to SharkSaw's thinner blade.
- **Raker Tooth:** This special tooth cleans the sawdust out of the kerf as the blade is pushed forward.
- **Diamond-Ground:** SharkSaw® blades are precision diamond-ground to sharpen each tooth on three sides. The resulting blades are extremely sharp.
- **Impulse Hardening:** SharkSaw's teeth are electrically hardened to improve longevity. In fact, they hold their edge two to three times longer than conventional blades.
- **Soft & Comfortable Handle:** Industrial strength handle features rubber-like elastomer double-injection, non-slip grips, for long-lasting comfort.
- **Replaceable Blade:** Twist-lock design allows for fast, easy replacement of worn blades.
