

SUPER FINECUT SAW

10-5/8" 19 tpi Item #10-2410 Replacement blade #01-2410

This saw features the thinnest blade (kerf 0.017") of the entire SharkSaw® line and is supported by a spine for stability. With its extremely small 19-tpi tooth set, this saw can make exceptionally smooth, fine cuts in a variety of woods. Specifically, it is great for cutting through extremely hard woods such as oak, ebony, and exotic imported species such as ironwood. This saw does such intricate work that cuts as thin as 1/32" are possible! It's ideally suited for cutting fine molding and intricate trim work. Cuts are ready for immediate gluing; sanding is rarely, if ever, required. It's the indispensable handsaw for fine woodworkers, furniture makers, boat repairs, crafts, and wooden model-making.

Recommended For: All types of hardwoods, miter cuts, dowels, dovetail work, crafts, balsa wood, thin boards, all types of precision cuts.

Special SharkSaw® Features:

- **Pull-To-Cut:** The SharkSaw® blade cuts when drawn toward you. This results in a more natural, smoother, straighter, and less fatiguing sawing operation—due in part to SharkSaw's thinner blade.
- **Raker Tooth:** This special tooth cleans the sawdust out of the kerf as the blade is pushed forward.
- **Diamond-Ground:** SharkSaw® blades are precision diamond-ground to sharpen each tooth on three sides. The resulting blades are extremely sharp.
- **Impulse Hardening:** SharkSaw's teeth are electrically hardened to improve longevity. In fact, they hold their edge two to three times longer than conventional blades.
- **Soft & Comfortable Handle:** Industrial strength handle features rubber-like elastomer double-injection, non-slip grips, for long-lasting comfort.
- **Replaceable Blade:** Twist-lock design allows for fast, easy replacement of worn blades.
