

HEAVY-DUTY PRUNING SHEARS

Item #62-5317

These Heavy-Duty Pruning Shears are lightweight and extremely sharp—perfect for pruning all kinds of live and dead branches up to 3/4" in diameter. It is uniquely designed to open in a wide “U” shape to direct the branch deep into the critical leverage point for greater cutting power with minimal effort. The thin cutting blades are made of high-quality double-tempered Japanese steel. The small bevels on the inner sides of the blades facilitate smooth cuts. The blades are hand-sharpened and, although designed to remain sharp, can be resharpened with a very fine diamond file. For maximum cutting power, the strong ergonomically designed elastomer handles are slightly offset from the pivotal point of the blades. The simple wire safety catch on the end of the handle positively locks the blades.
